

Online QTP Training

By

LearnQTP.com

Prerequisite

Hardware and Software

- Computer with good quality headphones
- Reliable and fast internet connection 256 kbps or more

Technical Knowledge

- Windows
- Web sites and browsers
- Software Testing concepts like regression testing, automated testing

OVERVIEW

This course provides a comprehensive understanding of using QuickTest Professional (QTP) as an automated functional testing tool.

This 4-day training course will help you understand and work comfortably with QTP. By the end of training you would be able

- To write your own QTP tests
- Parametrize QTP scripts
- Add checkpoints to them
- Use descriptive programming
- VBScript to write your own tests

Each day of the course is followed by tips-and-tricks & hands-on assignments to make sure that you are learning what is being taught in class.

Duration

4 Days. 4-5 hours each day.

List of Topics

<p>Day1 Introduction To Automation To Automate, or not to Automate Fundamentals of QuickTest Professional (QTP) Overview of a typical QTP process What do we mean by Objects? Concepts of Object Repository Ordinal Identifiers Check Points and what are those Types of checkpoints Record and create a simple script Tips and Tricks – Day1 Questions and Answers Assignment End of Day1 Training</p>	<p>Day2 Day1 Assignment discussion/Questions and Answers Using Regular Expressions in checkpoints. Writing Custom Checkpoints Reporting a step with reporter events. What are actions? Parameters Types of Parameters Environment Variables Using Global and local data sheets. Tips and Tricks – Day2 Questions and Answers Assignment. End of Day2 Training</p>
<p>Day3 Day2 Assignment discussion/Questions and Answers Advanced QuickTest Professional Debugging QTP Scripts Virtual Objects and Low Level recording. Introduction to VBScript and Working in expert view User defined and Built-In functions in QTP Tips and Tricks – Day3 Questions and Answers Assignment. End of Day3 Training</p>	<p>Day4 Day3 Assignment discussion/Questions and Answers Adding Synchronization Points Adding Transactions Introducing the third ordinal identifier Descriptive Programming Create recovery scenarios Associate a recovery scenario with a test Tips and Tricks – Day4 Questions and Answers Assignment End of QTP Training</p>
